ENVIRONMENTAL MANAGEMENT SYSTEM

TOYOTA ANGELES PAMPANGA, INC.

is now

**ISO 14001:2015
CERTIFIED**

ISO 14001:2015
ISO 14001:2012

0059
0020

On the 27th day of November 2018, **TOYOTA ANGELES PAMPANGA** gained a competitive advantage by being awarded with **ISO 14001:2015** certification, the updated version of ISO environmental management system standard.

This standard indicates good management and control of the environmental aspects and impact in line with the country's legal and standard requirements as well as the best-practices of the organization leading to the objective of reducing wastes, costs and risks. This is a framework designed to measure and improve the way natural resources are used and disposed of by the organization.

Through the ISO 14001:2015 Certification, Toyota Angeles Pampanga underwent assessments, trainings, documentations and process audits to ensure compliance to the standard.

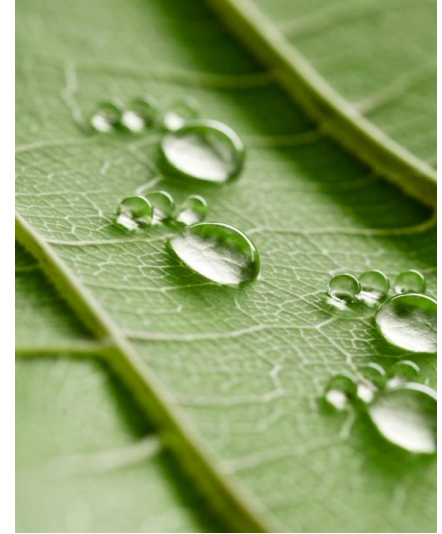

What is an Environmental Management System?

An Environmental Management System helps organizations identify, manage, monitor and control their environmental issues in a holistic manner.

Like other ISO management systems, it uses a High-Level Structure. This means it can be integrated easily into any existing ISO management system.

It also includes the need for continual improvement of an organization's systems and approach to environmental concerns.

What is ISO 14001:2015?

ISO 14001:2015 exist to help organizations minimize the negative effect of the organization towards the environment which causes adverse changes to air, water and land. It also specifies the requirements for an environmental management system that an organization can use to enhance its environmental performance. As Similar to ISO 9001 or the Quality Management System, these standards focuses on the process (operation and services), rather than the product output itself.

The overall idea is to establish an organized approach to systematically reduce the impact of the environmental aspects which an organization can control. Effective tools for the analysis of environmental aspects of an organization and for the generation of options for improvement are provided by the concept of cleaner production. ENVIRONMENTAL POLICY

TOYOTA ANGELES PAMPANGA, INC. is committed to minimize the impact of its activities & processes to the environment by promoting a more effective Environmental Management System in order to prevent pollution and ensure protection to the environment.

The following are the key point strategies to ensure an effective Environmental Management System:

- To minimize generation of waste by evaluating operations and ensure that they are efficient as possible;
- To prevent land, water and air pollution from our processes and activities;
- To conserve energy, water, wood, paper and other resources particularly those that are scarce or non-renewable while still providing a safe & comfortable working environment;
- To monitor discharges and emission of air, land, and water to control pollution to the environment;
- To minimize the release of greenhouse gasses, volatile organic compounds, vehicle emissions and other substances which may endanger the health & safety of the employees and other interested parties including negative effect to the environment;
- Ensure compliance to all applicable statutory and regulatory laws for both TGC and all of our service providers and
- To train our employees and other interested parties to actively involve everyone to have an effective implementation of the EMS.

TGC will periodically review the performance of its Environmental Management System and the result will be one of its inputs for the continual improvement of the Environmental Management System.

This policy is made available to all the concerned stakeholders and interested parties.
